INTRODUCTION

As part of Measure A, the San Ramon Valley Unified School District (SRVUSD) is facilitating a \$260 million renovation and construction of some of its middle and high school campuses, including California High School (Cal-High) in San Ramon at 9870 Broadmoor Drive. The campus is located in southern San Ramon, east of Interstate 680, south of Montevideo Drive, west of Alcosta Boulevard, and north of Pine Valley Road. The site is within the San Ramon Valley, and immediately west of the Iron Horse Regional Trail and the South San Ramon Creek. California High School began operation in 1973 and has an enrollment of approximately 2,500 students, which is expected to remain stable for at least the next five years. The school is contiguous with City of San Ramon Olympic Pool and Aquatic Park, Tennis Courts, and other recreational facilities.

The proposed renovation and construction on the California High School campus will result in a change to the look and operation of the campus to better meet the educational and instructional needs of students and faculty. The proposed improvements will be completed in the following three phases per the school's Master Plan:

- Phase 1 includes the construction of a new multi-story classroom building and new library building, including the provision of new electrical services to these buildings, and the relocation of parking and hard courts. The construction of a new fire truck access road, new fire water main and fire hydrants (as needed) is also included. (This phase is completed.)
- Phase 2 includes the demolition of the core building and arts/shops building, and the construction of a new shops building, electives building, and counseling building. (This phase is under construction.)
- Phase 3 will include the construction of a new gymnasium and remodeling of remaining older buildings, including the auditorium and existing gym. (This phase is still to be started.)

PROJECT PURPOSE AND ELEMENTS

This study prepared, by Kimley-Horn and Associates, Inc. (Kimley-Horn)¹, is to evaluate the current and proposed parking and circulation-related activities on the combined Cal-High/San Ramon site, and to recommend changes for improvement. Specific elements of the study include the following:

- Project coordination with city and SRVUSD staff
- · Documentation of existing conditions
- Preparation of a master calendar of activities
- · Assessment of peak parking demand
- Recommendation for parking and circulation concept plans
- Reduction of parking demand throughout the neighborhood

_

¹ Kimley-Horn is a full-service consulting firm offering planning, engineering, and environmental engineering services. Nationwide, Kimley-Horn employs more than 2,300 professional, technical, and support personnel in more than 60 offices including locations in San Ramon, Oakland, Stockton, Roseville, and Rancho Cordova, CA.

PROJECT COORDINATION

Coordination with City and SRVUSD Staff

Kimley-Horn coordinated with San Ramon Transportation, Parks & Recreation, and Police Department staff, as well as SRVUSD representatives in preparation of this study. Coordination included a project kickoff meeting held December 1, 2007. During the meeting, deficiencies regarding parking and traffic circulation were discussed. Details and format of the master calendar were also discussed and the city agreed to provide information on school and recreational events. A second project meeting was held on February 19, 2008, where preliminary results of field observations and subsequent potential site improvements proposed by Kimley-Horn were reviewed.

City Transportation staff also coordinated with Kimley-Horn during multiple field visits to observe drop-off and pick-up operations at the school.

Coordination with California High School Staff

California High School staff met with city Transportation staff and Kimley-Horn on January 28, 2008. Parking and circulation issues at the school were discussed and questions about future parking demand and construction activities were clarified. Specific topics included:

- Significant congestion on Broadmoor Drive from people trying to make a left turn into the drop-off circle. Lack of a dedicated turn lane on Broadmoor Drive causes traffic bottlenecks.
- Conflicts between pedestrians and vehicles near the Administration Building during the PM pick-up period.
- Parents dropping off in front of the new multi-story classroom building (i.e. Building E) interfere with parking and circulation.
- Dumpsters along the south drive block sight distance.
- Planned uses for parking lots that are currently occupied by construction materials.
- Excess teacher parking that could be used for student parking.
- Possible options for parking expansion to accommodate more vehicles.
- Conflicting messages on parking signs and pavement legends.
- Need for improved signing to direct motorists to parking spaces located at the back of Cal-High, especially during big events.

Coordination with Cal-High Master Plan Committee

Kimley-Horn participated in meetings with SRVUSD staff and the school's Master Plan architect to discuss refinements to the current school plan and other on-site needs. During the first meeting, held January 29, 2008, it was agreed that Kimley-Horn's Draft Parking and Circulation Study would be provided to Akol & Yoshii, Inc., architects for the Master Plan. At the meeting it was also discussed that during preparation of the initial Master Plan, a parking plan was also initiated but never completed. School district staff agreed to provide information to Kimley-Horn on the parking plan to the extent that it was available.

In a follow up meeting held July 7, 2008, Kimley-Horn met with Akol & Yoshii architects and SRVUSD staff to refine parking and circulation elements of the Master Plan. The meeting resulted in a general consensus of issues that would be incorporated into the updated Master Plan, including some changes to the Draft Parking and Circulation Study. Kimley-Horn coordinated with the Master Plan architects following the meeting to recommend additional refinements to regarding parking and circulation issues. Recommendations were incorporated and are included in a copy of the Master Plan layout included in this report.

EXISTING CONDITIONS

Cal-High Schedule

Classes at California High School begin at 7:30 AM and end at 2:55 PM, except on Mondays when they begin at 8:35 AM and end at 2:55 PM. Staff and faculty generally arrive a half hour before school starts and leave one half hour after the students leave.

Site Layout and Uses

The study site includes City of San Ramon recreational facilities comprising six tennis courts and the Olympic Pool and Aquatic Park (i.e. Aquatics Center) located in the northwest quadrant of the site. The remainder of the area is dedicated to Cal-High ball fields, buildings and other school-related facilities. **Figure 1** shows an aerial view of the combined San Ramon/Cal-High site.

School buildings are identified by letter and are as follows:

- A Administration
- B Gym
- C Technology
- D Future Gym (currently portable class rooms)
- E English/Social Science/Math
- F Library
- G Foreign Language
- H Shops
- J Science
- K Multi-Purpose
- L Electives (under construction)
- M Auditorium
- P Counseling (under construction)

Figure 1 - San Ramon/Cal-High Project Study Site

Ingress/egress from the site is from five driveways along Broadmoor Drive on the west side of the property. Students may also enter the property (on foot or bicycle) from the rear via the Iron Horse Trail or neighborhood east of the trail and adjoining drainage canal.

- Driveway #1 is located at the southwest corner of the site and serves parking areas and buildings located in the back (i.e. southeast) of the school. It serves two-way traffic with intermittent speed bumps to slow vehicles.
- Driveway #2 is for ingress only and is the major path used for drop off and pick up at the front (i.e. west side) of the school.
- Driveway #3 is an exit only from the site. Vehicles that enter at Driveway #2 generally circle counter-clockwise past the Administration Building and exit at Driveway #3, except during the afternoon when they are directed to exit the site at Driveway #4. Exiting at Driveway #4 helps eliminate congestion between traffic entering and exiting the site in close proximity.
- Driveway #4 serves two-way traffic for the Olympic Pool and Aquatic Park, and also functions as a major site exit during school dismissal (when Driveway #3 is closed).
- Driveway #5 at the north end of the site is for two-way traffic and principally serves the tennis courts.

Parking Policies and Procedures

Parking Permits are issued every semester to students who are in their Junior and Senior years of high school. In fall 2007 the parking permits were completely sold out to every student making a request. Permits are purchased for \$50 for the carpool area at the rear of the school and \$30 for the area by the tennis courts.

Parking permits are hung on the rearview mirror for parking security to see at all times.

Students may park on or off campus; however, existing parking policy permits only seniors to leave campus during the school day. All other students are to remain on campus even during lunch. Campus security regularly monitors the parking lots and perimeter of the school to enforce the policy.

Parking rules are enforced by school administrators. Disciplinary action can be taken for speeding, excessive tire noise, cutting off other drivers, driving in the wrong lane or in the opposite direction of traffic. The first offense includes suspension of the permit for two weeks. A second offense includes suspension of the parking permit for the rest of the year and possibly Saturday school or school suspension.

During the morning drop-off a parking attendant helps direct traffic in the rear student lot entering from Driveway #1 in an effort to minimize congestion. During the PM pick-up, school staff directs traffic in the drop-off circle for the first 10 minutes after school and cones are placed to direct cars out through Driveway #4.

See the **Appendix** for information on Cal-High parking guidelines.

Weekday Parking Demand

There are currently 453 total parking spaces on the Cal-High campus with 233 spaces for student parking and 220 for teacher/administrator parking. An additional 62 spaces are provided by the Aquatics Center parking lot for events after school. As projected in the California High School Master Plan, there will be a total future campus parking capacity of 613 spaces. **Figure 2** illustrates the designation of the existing site parking areas, including areas to be re-opened following construction.

Existing weekday parking demand was observed on multiple days when school was in session. Results indicate that most spaces dedicated for student parking were full but there were unoccupied spaces in areas reserved for teachers and administrators. A parking survey showed an average teacher demand of 172 spaces. **Table 1** summarizes the Parking Capacity by Parking Lot for current and future scenarios.

In the surrounding neighborhood, parking for students is limited given that most streets closest to the school restrict parking to residents only.

Table 1 – Current and Future Parking Lot Capacities

Parking Lots	Current Capacity	Future Capacity	Capacity Increase from Current to Future	Future Teacher Capacity	Future Student Capacity
Tennis Courts	53	54	1		54
Aquatics Center	62	62	0		
Teacher Lot (Front)	22	21	-1	21	
Principal's Lot	15	20	5	20	
Portables Lot	17	60	43	60	
Maintenance	17	21	4	21	
South Driveway Lot	63	81	18		81

Inner Teacher	16	15	-1	15	
Rear Student	117	168	51		168
Rear Teacher	110	28	-82	28	0
Total (Not Including Aquatics Center)*	453	613	160	206	413
Total (Including Aquatics Center)**	515	675	160	206	413

^{*} Aquatics Center Parking not open to school during school hours

^{**} Aquatics Center Parking open to school for after school events

Figure 2 – Designations of General Parking Areas

Residential Permit Parking

Permit parking on selected streets in San Ramon is authorized by Resolution No. 98-109 approved by the City Council on August 25, 1998. At the direction of the Council a Technical Advisory Committee was to develop and apply uniform criteria to set boundary limits for future expansions of the existing permit parking zones. Over time, city transportation staff has conducted several parking studies in areas requesting permit parking. The permit parking studies included the following elements:

- License plate survey of vehicles parked on the street
- Address verification of vehicles parking on the street
- Estimation of the extent of non-resident parking intrusion into residential areas in the vicinity of California High School
- Survey number of on-campus parking spaces available to students on campus on the days the residential parking surveys were conducted
- Verification of littering complaints
- Verification of residential address on petitions and letters.

Under the program the City has approved permit parking zones on several streets in the immediate vicinity of California High School. Additionally, the City approved a permit-parking zone near Athan Downs Park in response to resident complaints about parking overflow during organized league sports games. It is noted that the San Ramon General Plan, approved by the City's voters in 2002, includes a policy restricting future permit parking zones to the vicinity of California High School. **Figure 3** illustrates the locations of permit parking surrounding the school. Most permit areas restrict parking Monday through Friday from 7 AM to 4PM. Closer areas restrict parking to all days of the week. The nearest locations restrict parking to residents at all times of the day and week.

Figure 3 – Residential Permit Parking Areas

Event Parking Demand

At the time this parking and circulation study was initiated, the football season was over for 2007; therefore, observations of most of the largest parking generating events were over for the school year. Kimley-Horn, however, did observe parking demand associated with two basketball games to determine approximate parking demand per number of game attendees. This information was later used to help forecast parking demand for other major events.

Men's Basketball game vs. Foothill (7-9PM) @ Cal High (January 7, 2008)

Kimley-Horn observed parking off and on site before and during the basketball game. Weymouth Court, Newport Avenue, Millbridge Drive and Broadmoor Drive were occupied by cars parked near the school campus. Observations along the south driveway found that there were some cars parked near building H but no cars parked in the rear student lot in the southeast corner of campus. The teacher parking area behind building E was half full towards the football field, and the lots near the aquatics center, tennis courts, and teacher parking in front of the school were all full. A woman selling tickets at the game stated that approximately 500 people attend the basketball game. The total number of observed vehicles was approximately 300.

Men's Basketball game vs. Monte Vista (7-9 PM) @ Cal High (February 1, 2008)

Kimley-Horn observed parking before and during the game to determine how many parked cars were associated with the event. Weymouth Court, Newport Avenue, Millbridge Drive and Broadmoor Drive were occupied by parked cars near the basketball gym. Observations along the south driveway found that there were many cars parked near building H but no cars parked in the rear student lot to the southeast corner of campus. The teacher parking area behind building E was mostly full towards the football field, and the lots near the aquatics center, tennis courts, and teacher parking in front of the school were all full. Total number of observed vehicles was between 265 and 347 including occupied on-street spaces.

It was also noted that during the first 30 minutes of the game, many people were still arriving or were being dropped off at the front of the school.

SRVLA Swim Meet (6AM-5PM) @ Aquatics Center (March 16, 2008)

Kimley-Horn observed parking during the San Ramon Valley Livermore Aquatics (SRVLA) swim meet to determine the number of cars parked on school campus and off school campus associated with this event. Parking was observed on Todd Way, Christopher Way, along Broadmoor Drive, St. Denis Drive, Weymouth Court, Newport Avenue, Rutland Court, Millbridge Drive, and Riviera Way. "No Parking" signs were posted on Weymouth Court and Newport Drive to detract attendees from parking along the curb. Many residents were still unhappy with the parking situation due to the SRVLA event and that event attendees do not always honor the signs.

During the event, parking on the campus was over capacity. The tennis courts lot, aquatics center lot, front teacher lot, drop-off circle, and portables lot were all over capacity with cars parking in red zones and on striped areas. The rear teacher and student lots were both over 90% full. After speaking to an official, it was noted that the attendance throughout the day included 1,000 swimmers, 1,000 spectators, 150 coaches, and 50 officials, totaling 2,200 attendees at this particular SRVLA event. It was noted that not all participants stayed all day. Some arrived early and left early. Others came later and stayed late.

Parking Issues

Observations of the weekday parking and event parking revealed several issues:

- There appears a small shortage of on-site parking for students and an excess of parking for teachers.
- When construction is completed there will be an even greater surplus of teacher parking.
- If excess teacher parking is converted to student parking, there will be roughly a balance between supplies and weekday teacher and student demand.
- Even though there will be generally sufficient on-site spaces for typical weekday demand, some students and teachers will still choose to park on Broadmoor Drive or nearby unrestricted on-street parking spaces because the spaces are more convenient than parking at the rear of the school.
- Some parking demand is generated by students residing in areas east of the Iron Horse Trail and adjacent drainage canal. Some of these students find it more convenient to park in the vicinity of Mangos Drive and walk to the school from the back using a pedestrian bridge over the canal. During special events such as football games, drivers also generate additional demand by parking in the unrestricted areas of the neighborhood.
- Parking is significantly underused in the back of the school during most events which indicates that the location of the parking does not match the major activity centers including the football field, aquatics center, tennis courts, gym, and auditorium. Average walking distances between the back lots and major activity centers can be more than 1800 feet depending on the lot and destination; whereas, average walking distances from front lots to activity areas are less than 1050 feet. See Table 2 for average distances from parking and activity areas.
- Longer walking distances translate into a poorer level of service for pedestrians.
 As noted in **Table 2**, walking distances from the rear student and teacher parking lots to the football field, gym, and aquatics center are all level of service D. Front lots and most of the neighborhood streets are LOS C or better.
- Reluctance by drivers to park in the back lots is partially connected with the delay in being able to exit from the back lots along the south driveway when school or events end.
- Evening activities often end after dark and attendees likely feel less comfortable walking to their vehicles if located at the back of the school.

Table 2 – Walking Distance Matrix

	Destination									
Parking Lot	Football Stadium		Basketball Gym		Swimming Pool		Auditorium			
	Distance (ft)	LOS	Distance (ft)	LOS	Distance (ft)	LOS	Distance (ft)	LOS

Site Circulation Issues

Traffic circulation was observed on multiple days when school was in session, with principal focus on times surrounding the AM start and PM dismissal periods. Specific deficiencies noted include:

- Lack of left turn lane on Broadmoor Drive Southbound vehicles turning into the school's main drop-off loop do not have an exclusive left turn lane. During periods of heavy volumes during school start and end bell times, turning vehicles block southbound through traffic.
- Vehicles are left unattended along the curb near the Administration Building Unattended vehicles inhibit on-site circulation particularly during AM and PM bell periods.
- Students walking to transit stop near Administration Building conflict with vehicles

 Students leaving campus towards the transit stop on Broadmoor Drive (near Driveway #3) cross the path and conflict with vehicles exiting the school site during PM dismissal times.
- Students crossing the south driveway, approximately 200 feet east of the south driveway/Broadmoor Drive intersection, slow traffic flow trying to exit from the back lots. This condition is somewhat sporadic because of the arrival patterns of the students at the crossing when school ends and does not significantly affect the capacity of the exit at Broadmoor Drive.
- Pavement striping and markings on the south driveway are obliterated At the intersection with Broadmoor Drive the lane lines and turn arrows have been worn away due to pavement trenching and other construction activities.

- "SPEED BUMP AHEAD" sign is misplaced The sign for vehicles entering on the south driveway is placed after, rather than ahead of, the first speed bump.
- Other campus signs and pavement markings indicate conflicting messages. For example, signs for a front parking lot indicate the spaces are for teachers but the pavement markings designate the spaces for the aquatics center.
- Garbage and recycling dumpsters create a sight distance hazard Dumpsters sitting on a concrete island along the south driveway (near the Science Building) block sight distance for vehicles exiting from parking lots and for pedestrians walking in the vicinity.
- Existing speed bumps are very abrupt Existing bumps may prevent some drivers from using the back lots, especially during events. Drivers appear to avoid the lot because of a fear of possible damage caused by the bumps to their vehicles.
- Current construction materials storage blocks convenient drop off circulation near the multi-story classroom building Vehicles dropping off students near the building must turn make a U-turn in the lot to leave. (This condition is temporary and will be corrected when construction is completed.)
- Configuration of the back parking area promotes congestion during school dismissal – Drive aisles from several parking areas converge in the same location, thus creating a confluence of vehicles that are four or more abreast, all trying to leave the site via the south driveway. The condition promotes competition between drivers and creates a traffic hazard.
- Students backing out of parking stalls along the south driveway create congestion during school dismissal.
- Lack of capacity at nearby STOP controlled intersections creates congestion –
 Nearby intersections at Broadmoor Drive/Montevideo Drive and Broadmoor
 Drive/Westchester Drive do not have sufficient capacity to accommodate traffic
 during the PM dismissal period. Vehicles subsequently queue back towards the
 high school and create additional congestion at school access driveways.
- The existing parking policy that permits only seniors to leave campus during the school day may promote others to park off campus (in the neighborhoods) where it is easier to leave during lunch or other times of the day. Although this occurs, campus security regularly monitors the parking lots and perimeter of the school to minimize the activity.

MASTER CALENDAR

A master calendar was developed to illustrate the typical events that occur on the site (i.e. at the tennis courts, aquatics center, and school) throughout an entire year. A school calendar year of 2007-2008 was chosen instead of a normal calendar year because information about the second half of 2008 was unavailable.

Information included in the master calendar comprised events from the San Ramon Parks & Community Services Department, Aquatics Center staff, and Cal-High representatives. All the data was collected by the city through email and phone.

Information on the school was provided through the Assistant Principal, Mr. Ken Nelson. A document listing every school event by day and time helped create the master calendar. The list of the main activities included the number of participants expected to be involved and attend individual events. Each event list also indicated the expected number of participants and spectators even though some of the events are in the past.

Typical activities include:

- Senior graduation
- Swim meets
- Football games
- Basketball games
- Back to school night
- Pops concerts
- Sports practices
- SAT preparation classes
- Administration meetings
- Other meetings and sporting events

A two-sided calendar was prepared from the information. The document included the Fall Semester on the front and the Spring Semester and summer on the back. The calendar displays the event and the time they begin and end. Each event is color-coded to differentiate school events from city events. A calendar is included as an attachment to this report.

PEAK PARKING DEMAND

Attendance information for the calendar events was ultimately translated into estimates of parking demand that would likely occur on an individual day to determine if the demand would exceed the capacity of the site. Included in the **Appendix** is more detail about each event. It describes the number of participants at each event and the location of the event. The information also indicates the top 10 days of highest number of participants with the main event and the number of people at that event.

Demand Projections

School basketball events were used as a surrogate for school-related events to determine an approximate ratio of parking demand vs. number of game attendees. Parking demand was determined by observing the number of vehicles parked on campus and the approximate number of non-resident vehicles in the adjacent neighborhood. Non-resident vehicles were estimated by comparing parking levels before and during the game. This methodology resulted in a low and high estimate of parking demand. The low estimate was calculated to be 0.18 vehicles per attendee and the high estimate was 0.24 vehicles per attendee. The ratio takes into account that some attendees and participants at events will walk or be dropped off at the school.

San Ramon Valley Livermore Aquatics (SRVLA) swim meet events were used as a surrogate to determine an approximate ratio of parking demand vs. number of game attendees for SRVLA swim meets. Parking demand for the SRVLA swim meets were characterized differently than school events based on field observations and therefore use a different ratio of parking demand vs. number of attendees. At the SRVLA event there were a higher number of cars per attendee and therefore the parking on-street was greater. Non-resident vehicles were estimated by comparing parking levels before and during the swim meet. This methodology resulted in a low and high estimate of parking demand. The low estimate was calculated to be 0.26 vehicles per attendee and the high estimate was 0.31 vehicles per attendee. The ratio takes into account that some attendees and participants at events will walk or be dropped off at the event.

Top Ten Events

Based on the ratios described above, low and high demand projections were prepared for the ten largest events on campus assuming the campus construction is completed and all parking areas are open. Calculations are respectively shown in **Table 3** and **Table 4**. Results from the tables were also converted into figures. **Figure 4** illustrates a low estimate of the on-site and off-site parking demand associated with the top 10 events of the year and **Figure 5** shows a high estimate. Note that the SRVLA swim meets may have a lower daily participant number, but a higher overall parking demand due to the SRVLA's high demand ratio between number of attendees and parking demand.

^{*}using high estimate of cars

Figure 4 – Top 10 Parking Days - Low On-Site and Off-Site Volume Estimates

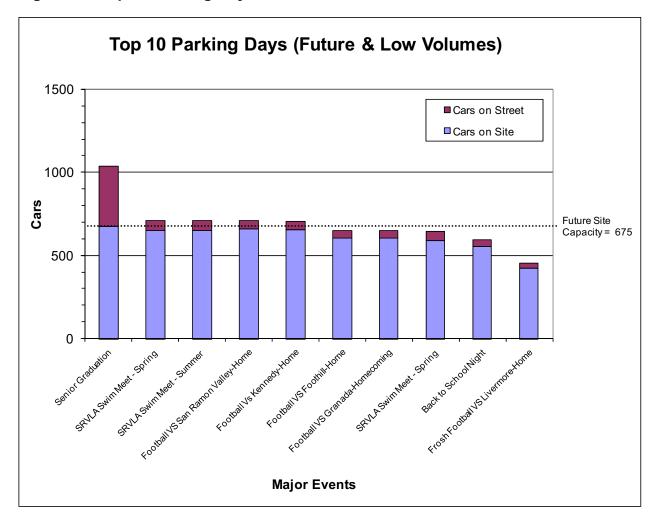

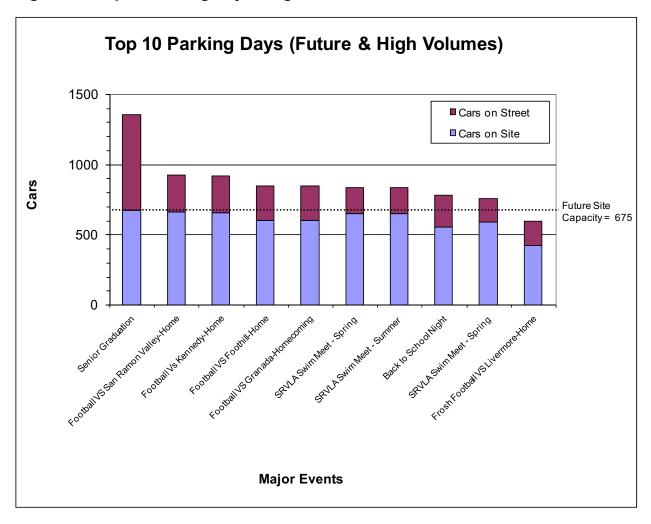

Figure 5 - Top 10 Parking Days - High On-Site and Off-Site Volume Estimates

On-Site and Off-Site Event Deficiencies

There are 515 total parking spaces on campus including the Aquatics Center parking lot for after school activities which will be increased to 675 at the completion of campus construction. Excess demand ranges from 27 to 358 under the low estimate and from 81 to 677 under the high estimate.

Under the best conditions (i.e. low demand estimate), all but five events including senior graduation, a couple of football games, and a couple of swim meets could be accommodated if the additional 160 spaces are created on-site per the updated Master Plan. This presumes that event attendees could be attracted to fully use the back parking areas. As noted in **Table 3**, excess demand is 60 or fewer vehicles for all but graduation.

Under the high demand estimate the top nine events including senior graduation, swim meets, major football games, and back to school night cannot be fully accommodated on the site. As noted in **Table 4**, excess demand ranges up to 267 except for graduation which is estimated to exceed capacity by 677 vehicles. .

Actual demand is likely to be somewhere between the low and high estimates.

RECOMMENDED PARKING AND CIRCULATION CONCEPT PLANS

Parking Concepts and Recommendations

Parking concepts and recommendations are graphically illustrated in **Figure 6** and are described below.

- 1. Reconfigure the existing rear teacher and student parking areas improve circulation and reallocate spaces. Reconfiguration should reorient parking aisles and reduce the width of the primary circulation aisle so that multiple vehicles cannot drive abreast while exiting the back lots. This recommendation has already been incorporated into the new Master Plan and will decrease the rear student and teacher lots by roughly 5 spaces. Reallocate approximately 68 spaces from teacher parking to student parking after campus Master Plan construction is completed. As shown in **Figure 7**, the three rows of parking in the teacher lot closest to Building H should be assigned to teachers and administration, with the remainder of the parking spaces allotted to students.
- 2. Use a police officer at the south driveway/Broadmoor Drive intersection to assist traffic in exiting the back lots after football games and other major events. Officers will already be at the events and should help direct traffic for approximately 15 minutes after the event. Overtime costs may occur if an officer is used for traffic circulation purposes.
- 3. Identify and sign the shortest walking routes from the back lots to the football field, aquatics center, gym and auditorium. Signs or unique pavement markings could be used to help designate the shortest routes.
- 4. Conduct a lighting analysis and provide additional lighting if needed to ensure that each walking route is well illuminated.
- 5. Enhance the south entrance for the football field near the back lots. Direct pedestrians accordingly to the south entrance.
- Create additional parking adjacent to the back student lot. This recommendation
 has been incorporated into the Master Plan as shown in Figure 8. Approximately
 114 total parking spaces can be created in this area.
- 7. Expand the portables lot in the front of the school near the auditorium to increase the parking capacity. This can be completed after construction is finished and the portables are removed. Removal of the portables will gain 31 more parking spaces from the existing parking capacity. An additional 12 spaces will be created from expanding the lot. The overall capacity in this area will increase by approximately 43 spaces. This alternative has been incorporated into the Master Plan as shown in **Figure 8**.
- 8. Close off the exit to the drop-off circle in the Principal's lot and expand the lot to increase the parking capacity. This alternative has been incorporated into the Master Plan as shown in **Figure 8**. Approximately 5 new spaces will be created in this area.

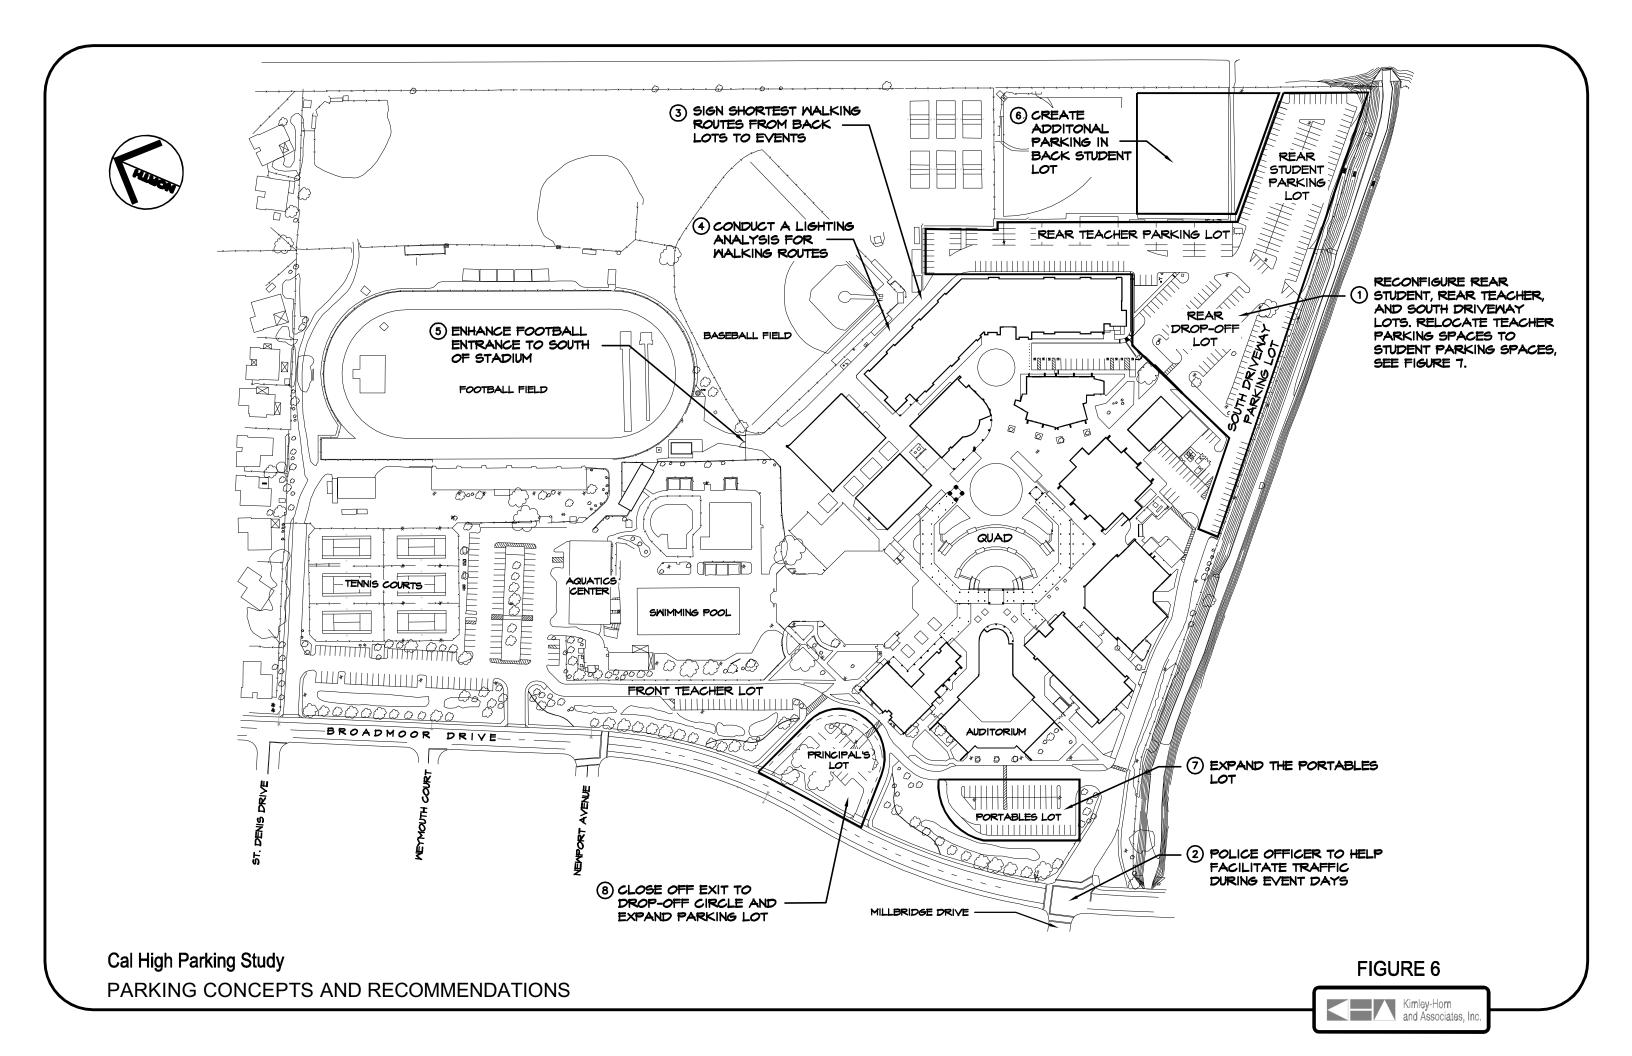

9. Review opportunities and costs for shuttle service between California High School and a nearby overflow parking location during high demand events including graduation, swim meets, football games and other major sporting events.

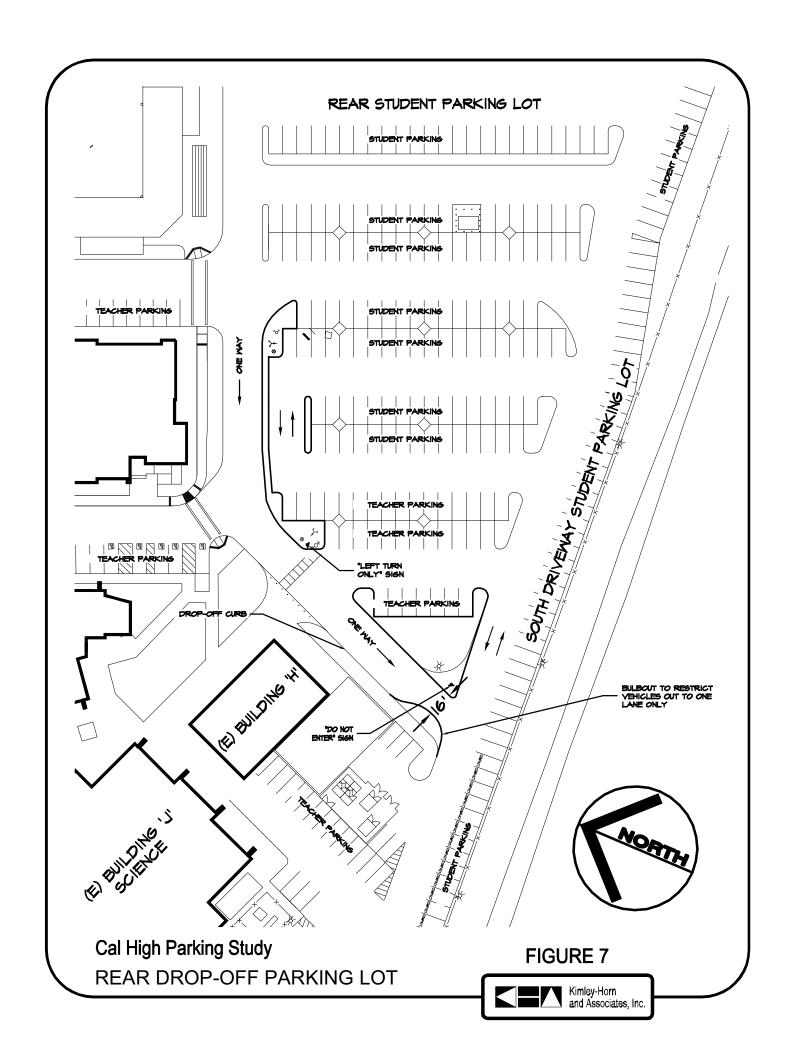

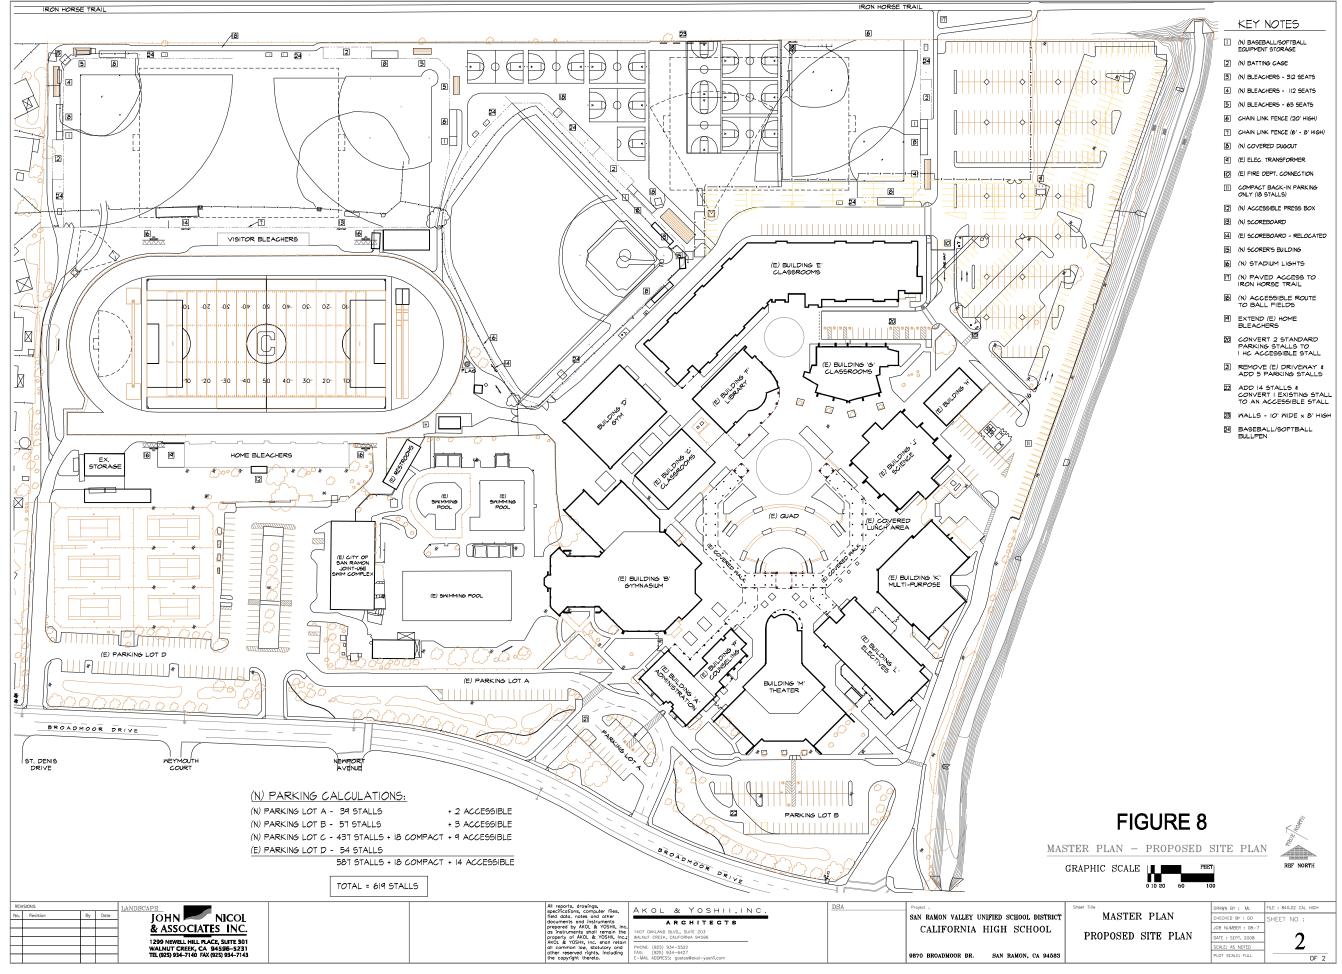

Circulation Concepts and Recommendations

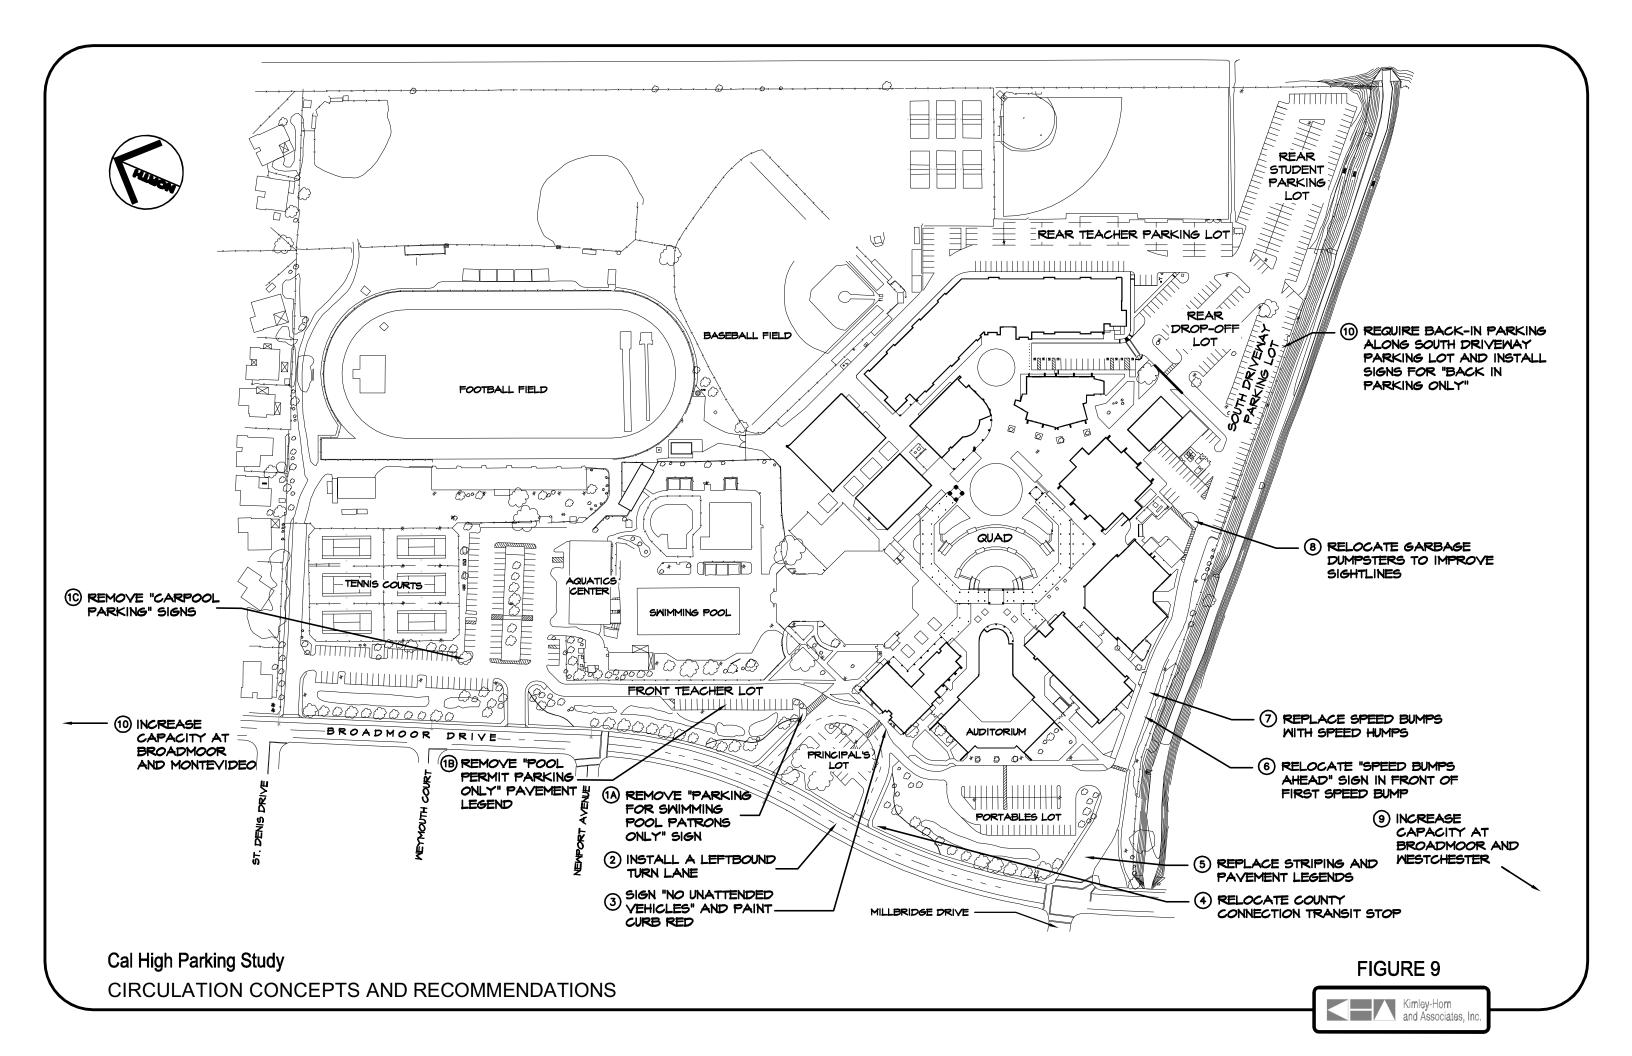

Circulation concepts and recommendations are graphically illustrated if **Figure 9** and are described below.

- 1. Update conflicting signing and pavement markings on campus.
- Install signs to prevent unattended vehicles near the Administration Building. Install signs along the curb near the Administration Building that read "NO UNATTENDED VEHICLES" and paint the curb red.
- 3. Install a southbound left turn lane on Broadmoor Drive at Driveway #2. Remove parking along the front of the school and shift the northbound travel lane to the east to create sufficient space for a southbound left turn lane. Retain the residential parking on the west side of the street. The change will result in 11 feet for the northbound travel lane, 10.5 feet for the southbound travel lane, and 10 feet for the southbound left turn lane.
- 4. Relocate the County Connection transit stop to south of Driveway #2. The new transit stop should include a new paved waiting area and other amenities similar to the existing stop near Driveway #3. Direct students to the bus stop along the front of the Administration Building so they do not have to cross traffic picking up students. (Relocation of the stop is necessary to accommodate the new southbound left turn lane.)
- 5. Replace lane striping and pavement legends on the south driveway for a left and through/right lane at the intersection with Broadmoor Drive.
- 6. Relocate "SPEED BUMP AHEAD" sign. The existing sign on the south driveway should be relocated ahead of the first speed bump.
- 7. Replace the existing speed bumps with more gentle speed humps.
- 8. Relocate the garbage and recycling dumpsters. Dumpsters sitting on a concrete island along the south driveway (near the Science Building) should be relocated to prevent them from blocking sight distance for vehicles and pedestrians.
- 9. Require back-in parking along the south driveway. Install signs for "BACK IN PARKING ONLY" to reduce congestion during school dismissal. It is recognized that some disruption of circulation will occur on the morning as students arrive and park; however, traffic volume is less concentrated during this period so overall conflicts are minimized. During dismissal, drivers can pull directly into the line of exiting traffic without having to block circulation by backing out of a parking stall.
- 10. Coordinate with nearby middle and elementary schools to have them stagger their bell times to relieve congestion that interferes with Cal-High traffic.

Other Parking and Circulation Improvements Considered But Not Recommended

Additional improvements were evaluated by Kimley-Horn but were not recommended. These improvements are described below.

- Park vehicles on the tennis courts during large events This alternative was not recommended for multiple reasons. Difference in grades between the tennis courts and the adjacent parking areas, the need to take down the nets each time, and the potential for damage to the surface of the courts make this option impractical.
- Create new parking at the location of the tennis courts and move the tennis courts to the back parking areas – This alternative was not recommended because it places the courts in an area where safety of the users is difficult to adequately provide. (This option was previously considered under other site planning studies and also rejected.)
- Build a parking structure at the tennis courts and place the courts on the roof of the structure – Ingress to the parking structure would likely be from the west side and egress from the east side. This alternative was not recommended because the net increase in parking is estimated to be 52 spaces at a cost of roughly five times the cost of developing surface parking.
- Build a parking garage to accommodate all but graduation demand Based on demand estimates for major events, the garage would need to accommodate up to 267 spaces. A garage of this capacity would likely be 3 levels with dimensions of roughly 124 feet by 270 feet. This alternative was not recommended because the cost would be roughly \$6.5 million but would only be needed between 5 to 9 times per year. Furthermore, the preferred location in relation to the major activity centers would be in front of the school; however, there is insufficient space for a garage of this size within the footprint of existing surface parking. It would also be out of proportion with the scale of the adjacent neighborhood.
- Add another exit lane on the south driveway This alternative was not recommended because the flow of exiting traffic is limited by the south driveway/Broadmoor Drive intersection, not the lack of a second exit lane. Furthermore, adding a second lane would require pedestrians at the "mid-block" crosswalk 200 feet back from the intersection to cross two exit lanes of traffic. There is a high likelihood that one lane of vehicle would stop and the other lane would not see the pedestrians, thus creating an increased safety hazard and potential for vehicle/pedestrian collisions.
- Create northbound free right turn at the south driveway/Broadmoor Drive intersection – This alternative was not recommended because the free right would cross the walking path of students and the higher speeds of the free right turn would create an increased safety hazard and potential for vehicle/pedestrian collisions. Furthermore, the free right would not speed up the rate of vehicles traveling along the south driveway to the back lots.

- Eliminate the mid-block crosswalk 200 feet back from the south driveway/Broadmoor Drive intersection to eliminate the conflict This alternative was not recommended because it will result in at least two less desirable conditions. One is that students will probably continue to cross at the unofficial location (because it is a shorter route to destinations south of campus) which will increase the likelihood of conflict. The other is that the remaining pedestrians will be redirected to the south driveway/Broadmoor Drive intersection where there is much more traffic and congestion.
- Relocate the main entrance for the football field This alternative would move
 the main entrance from near the Aquatics Center to near the south end of the
 field and closer to the back lots. Pedestrians would be redirected accordingly to
 the new entrance. In conversations with school district staff and the Master Plan
 architect, it was determine that closing the existing entrance near the Aquatics
 Center would create undesirable effects and be costly. Therefore, it was
 determined that a better option was to enhance the existing secondary access
 near the south end of the field.
- Create additional parking behind the tennis courts This alternative which would add roughly 45 parking spaces was not recommended for reasons including the need to relocate existing storage buildings used by the athletics department, construction of a ten foot retaining wall, and relocation of one of the high-mast light poles.
- Create additional parking between the Aquatics Center and Broadmoor Drive –
 This alternative which would add 15 parking stalls by expanding the existing
 teacher lot. However it was not recommended because of reasons including
 potential interference with traffic circulation during the afternoon pick-up, possible
 conflicts with emergency vehicle access, and significant loss of landscaping that
 buffers the view of the lot from the adjacent residences.
- Open up the drive aisle near the materials storage area The alternative would have the contractor modify the safety/security fencing around the construction materials storage area to allow convenient drop off and pick up circulation near the multi-story classroom building. (This condition is temporary and will be corrected when construction is completed in the rear of the school.)

APPENDIX

CALIFORNIA HIGH SCHOOL PARKING GUIDELINES Spring 2008

Ticketing: North, South, Band, Teacher lots near the pool and Science area.

- a. All vehicles must have 2008-2009 permit <u>hanging from the rearview mirror at all times.</u>
- b. All vehicles must be parked in appropriately lined stalls.
- c. Drivers violating any school, district, or county law will be cited accordingly.
- d. Read the permit contract thoroughly; all rules will be strictly enforced.

Vehicles may not display any offensive symbols, signs, or words.

- a. First offense: Removal of item(s) from vehicle...parent will be contacted.
- b. Second offense: Removal of item(s) from vehicle, suspension of permit for semester, Saturday School, and parent conference.

Students must obey all parking/driving rules and school officials. Note: <u>Unsafe driving includes speeding, laying rubber, cutting off other drivers, driving in the wrong lane or in the opposite direction of traffic.</u>

- a. First offense: Suspension of permit for two weeks.
- b. **Second offense:** Suspension of permit for remainder of the school year and possible Saturday School or school suspension and parent conference.

Any unsafe driving on school campus is reported to the San Ramon Police.

Permit and/or permit replacement will cost \$50 for carpool parking or \$30 for pool area (per semester). It may take several weeks to investigate the location of a missing permit. During this time, the student will not be allowed to park on campus.

Having a parking permit is not a guarantee that a parking spot will be available.

Parking permits are the property of the school and are issued to the student for the privilege of parking on the school campus. Note: Permits transferred/sold/given to other students will be forfeited.

All vehicles are subject to search while parked on public school property.

California High School is not responsible for theft, loss, or damaged property for cars parked on campus.

Note: Parking lots are off-limits to all students during the school day.

Drivers are not to take underclassmen (Juniors, Sophomores, or Freshmen) offcampus during lunch. Drivers are responsible for the passengers in their car. Consequences will be given to both the driver and passengers.

Carpool Parking

CAL HIGH
<u>Spring Semester</u> Carpool Parking Permits

Application Spring 2008

California High School 9870 Broadmoor Drive San Ramon, CA. 94583 (925) 803-7400

Please return this form with a \$50 check made out to CHS

Student Name	Carpool permit number
Vehicle make and model	Other cars
Vehicle license plate	Vehicle color

Parking Rules and Responsibilities:

- 1. Carpool permits are available to TWO OR MORE students traveling together in one car.
- 2. Students must park in designated STUDENT PARKING stalls...Note: All parking stalls are carpool only.
- 3. The carpool permit is **NON-TRANSFERABLE** to any student other than those listed below.
- 4. Parking in fire lanes, on sidewalks or in driveways will result in a citation.
- 5. The carpool permit must be displayed on the rear view mirror at all times or a citation will be issued.
- 6. Parking permits are the property of the school, and are issued to the student for the privilege of parking on the California High School campus.
- 7. ALL PARKING GUIDELINES ARE ENFORCED.
- 8. The cost of a carpool permit is \$50, per semester i.e., .54¢ per day.
- 9. Parking lots are off-limits to all students during the school day.
- 10. Student received a copy of the California High School Carpool Parking Guidelines

Students / Parents:

Your signature below indicates your acceptance and understanding of the rules and regulations listed on this application, in the student handbook, and of all county and state vehicle laws.

***Please list all students who may carpool with you, and the vehicle license plate of the cars you will be driving.

ANY MISINFORMATION OR FORGERY ON THIS APPLICATION WILL RESULT IN THE LOSS OF ALL PARKING PRIVILEGES AT CALIFORNIA HIGH SCHOOL.
